Dear US DOJ

Why I think Microsoft is "wrong":

1. Microsoft dominance means innovation will suffer. If the masses do not have access to the proper tools, construction "will be delayed".
2. Dependancy on any one entity for any one service is dangerous (the USGOV should know this).
3. A win for Microsoft is a loss of freedom for the citizens of the United States (and irrelevant for the rest of the world). A MS win would force Non-USA people over to open-source quicker leaving the USA behind.
4. Open-Source is like a house-wife. To some, the wife seems to work for free and is foolish to do so. To others, the quality of her work is most important.
5. PC's come with MS Windows (as like sales tax does), "like it or not" (monopolistic).
6. Information technology is too important for any one entity to control. The people of the world should and will have control regardless in the end of what any one company or government does.
7. If Microsoft one day goes bankrupt (it could happen), then what?
